Figure and table index

DBA 802 package. Study: KG-EWS. Manuscript author: Divya Munagala. These are the display items in the finalized short communication. Nothing in this index was added to enlarge the package.

Figure 1

File. 02_Tables_Images_Graphs/Figure_1.png

Also embedded in the Word manuscript and the PDF manuscript.

Size. 1950 × 1350 pixels.

Caption. Paired reduction in decision cost, baseline minus KG-EWS, plotted for each of 120 cohorts. The larger marker is the mean, with a 95% t interval. A point above the zero line favors KG-EWS.

The plotted means are the paired cost advantages 0.024 (logistic regression), 0.035 (knowledge base), and 0.077 (gradient boosting). Those means are the Table 2 advantages. The figure is a cohort scatter with a mean and interval. It is not a bar chart.

No second figure

The finalized manuscript contains one figure. Figure_2.png was not created. An earlier architecture diagram and an earlier bar chart were removed from the research paper before this package was built. They are not part of the study that is being submitted.

Table 1

File. 02_Tables_Images_Graphs/Table_1.xlsx

Caption. Mean test-slice performance over 120 cohorts.

Four rows: logistic regression, knowledge base, gradient boosting, and KG-EWS. Columns: AUC, decision cost, rule-miss, smooth-miss, and false-alarm rate. The displayed sheet is rounded to three decimals. The Source means sheet keeps the unrounded values from results.json.

Table 2

File. 02_Tables_Images_Graphs/Table_2.xlsx

Caption. Paired comparisons on the 120 cohort-level test results.

Six rows: cost and AUC against each of the three baselines. Positive advantage favors KG-EWS. Counts of better, worse, and tied cohorts match the manuscript, including 59 / 28 / 33 against logistic regression on cost.

Graphical abstract

The graphical abstract is a separate professor item in 04_Graphical_Abstract/. It is not a results figure and it is not inside the manuscript.
